

# DOES MY ATTIC NEED MORE INSULATION?

Installing new attic insulation is one of the most effective ways to improve indoor comfort and reduce energy costs year-round. Is it time to upgrade your attic insulation?

## SIGNS OF AN UNDER-INSULATED ATTIC

Here's how to tell if your attic needs an insulation upgrade.

### ICE DAMS

Ice dams on your roof in the winter are a sign that indoor heat is escaping into the attic, melting snow on the roof.

### HOT UPSTAIRS

Upstairs rooms often become hot in the summer when attic heat seeps down through gaps in attic insulation.

### INDOOR DRAFTS

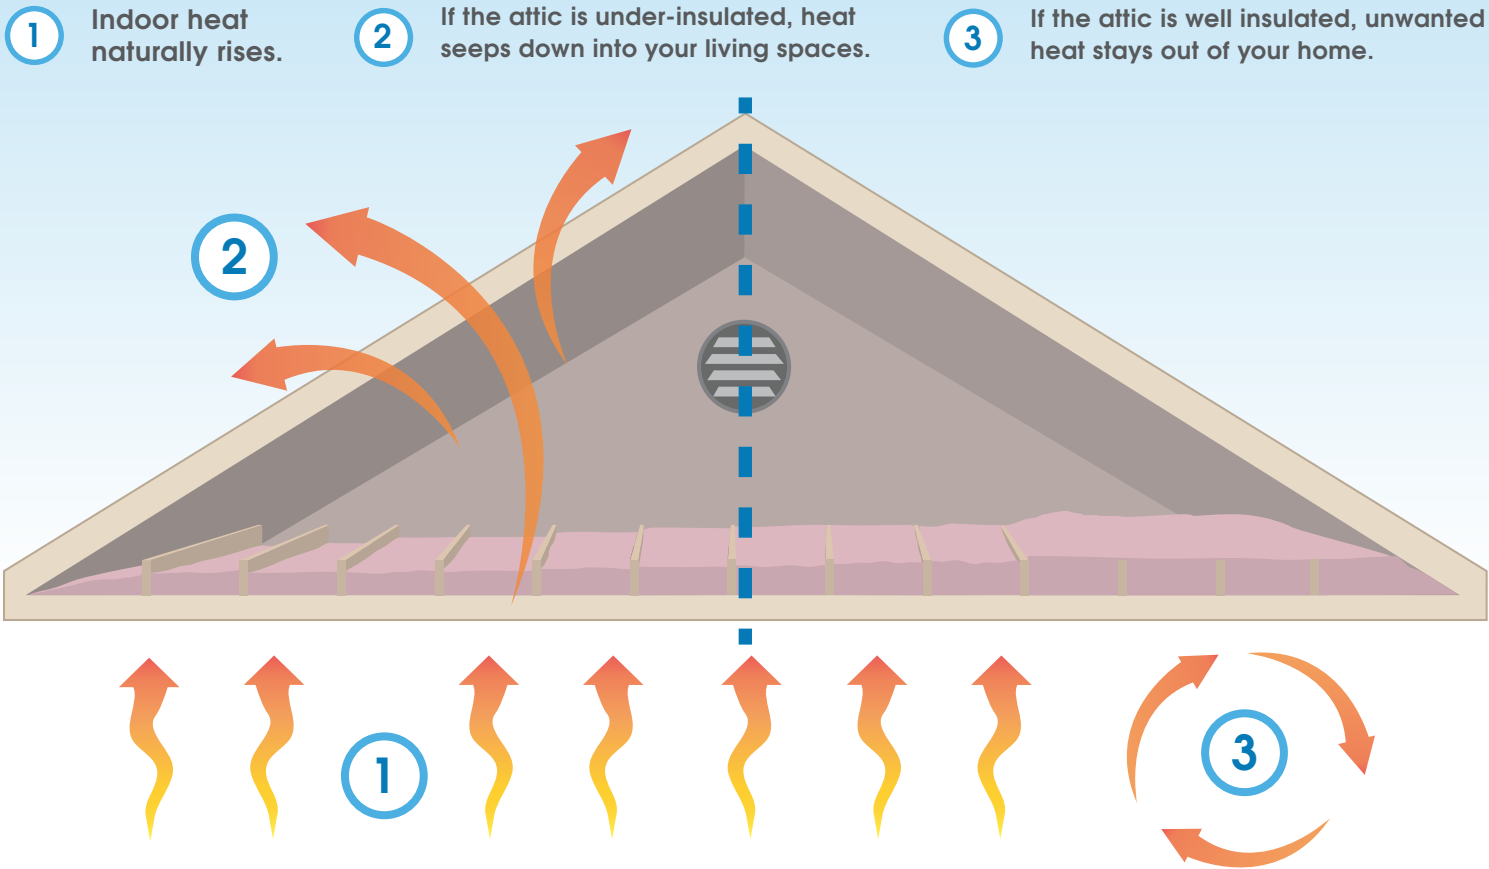

Drafts occur when indoor heat rises into an under-insulated attic, creating a suction effect that pulls outside air in.

### HIGH ENERGY BILLS

High energy bills can mean heat is seeping down from the attic in the summer and escaping through the attic in the winter.

## HOW ATTIC INSULATION WORKS

## BENEFITS OF PROPER INSULATION

Proper attic insulation offers more benefits than you may think.
