

HOW

# ICE DAMS CAUSE DAMAGE TO YOUR HOME

If you have large icicles hanging off your roof, you're at risk for ice dams! Ice dams can cause lots of problems for homeowners—here's how.

## Issues Ice Dams Can Create:

Water leaks

Mold & moisture growth

Indoor air quality issues

Structural damage

Wet and less-effective insulation

Water entering your home is messy and the problems it creates can be expensive to address, especially because damage often occurs behind walls and in hard to reach areas of your house.

## Attic Insulation: The Solution for Ice Dam Prevention

Proper attic insulation and air sealing solves ice dams for good, keeping heat from escaping your home in the winter. Even better, insulation and air sealing lower energy bills and make your whole home more comfortable.

**Stop ice dams.** Contact us to schedule a no-cost home assessment.
